## **DETAILED ACTION**

This office action is in response to amendment filed on July 7, 2007. Original application contained Claims 1-69. Applicant previously added new Claims 70-73. Presently claims 1-73 are pending.

### ***Response to Arguments***

Applicant's arguments with respect to claim 1-73 have been considered but are moot in view of the new ground(s) of rejection.

### ***Allowable Subject Matter***

Claims 1-66, and 70-73 are allowed.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 67-69 are rejected under 35 U.S.C. 102(e) as being anticipated by Wambach et al (U.S. Patent 6,330,648).

As per claim 67, Wambach teach an apparatus for protection of computer assets from unauthorized access (Fig.1-6) comprising: a south bridge comprising: an interface controller operatively coupled to receive a interface control command to control an interface device; and a protection engine operatively coupled to the interface controller for preventing unauthorized access to the interface device and operatively coupled to receive the interface control command to determine whether a source of the interface control command is authentic and to selectively allow or inhibit execution of the interface control command by the interface controller depending on whether or not the source of the interface control command is authentic (col.3 line 55 to col.5 line 24).

3. Claims 68-69 are rejected applied as above rejecting Claim 67. Furthermore, Wambach teach protecting unauthorized access of a system, wherein:

As per claim 68, a one-time-writable register operatively coupled to the protection engine to store a value used to determine whether the source of the interface control command is authentic (col.8 line 15 to line 56).

As per claim 69, the value is accessible only to the protection engine and to an operating system (Fig.1, col.4 line 23 to col.5 line 14).
